Taganize

Before downloading the Taganize app, please ensure that NFC has been turned 'On'.

Taganize

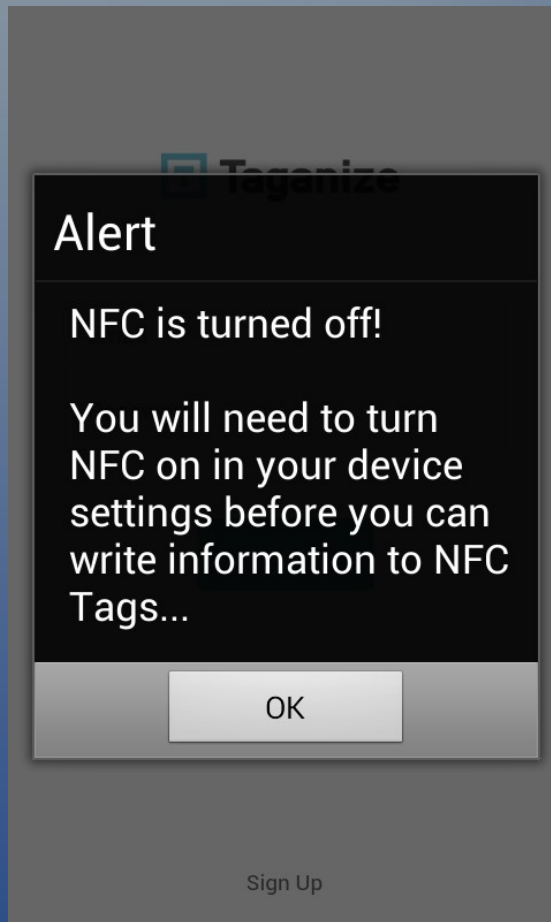

NFC can be turned 'On' & 'Off' through your smart phones 'System Settings' menu.

Taganize

For your convenience, our app will notify users whenever NFC has been disabled.

Taganize

Once NFC has been turned 'On',
You're ready to go to the store and
install the Taganize app

Taganize

Users will be automatically logged into their account's dashboard. A folder in their name will have been created. Taganize uses folders for organizing and managing tags.

Let's create and write our first NFC chip! We can do this by clicking on the 'New Tag' button found on the bottom left hand corner of the app.

Taganize

Edit Tag

Tag name

Target URL

Folder

The 'Edit Tag' view will open and here you can enter the 'Tag Name' and 'Target URL' of your new tag. Taganize supports: http and uri's like geo, sms, tel and mailto. When your done click save

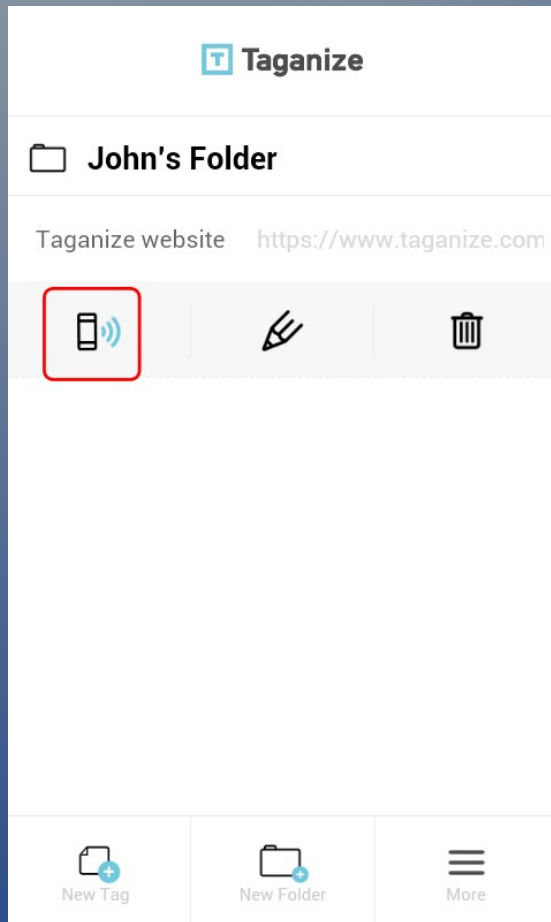

Taganize

We can write the tag to NFC by tapping the tag name.

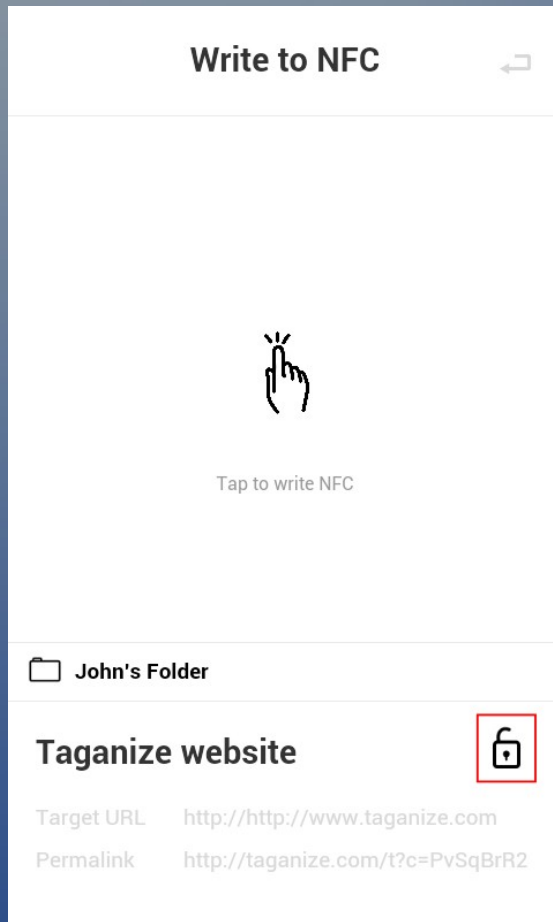

Taganize

An extended menu is revealed. Tap the 'Write NFC chip' icon found to the extreme left of the menu.

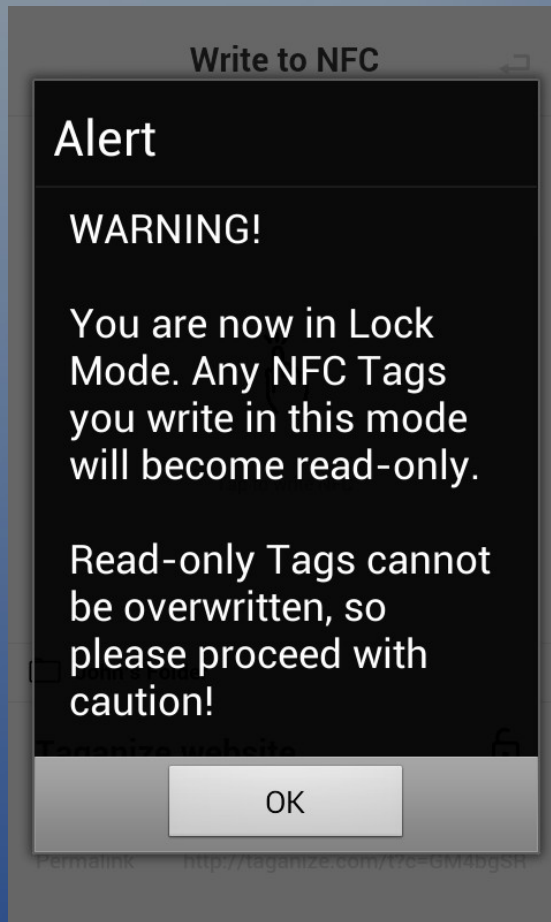

Taganize

When the 'Write to NFC' view opens you will be able to decide whether or not you would like to 'lock' Your NFC tag. To lock your tag, simply tap the lock icon found at the bottom right hand corner of the app

Taganize

When the lock feature is enabled a 'Warning' will appear to alert the user that tags written as read-only cannot be undone. However, such tags can be recycled by simply editing their Taganize 'Target url'.

Tap 'OK' to exit this view and enable 'read only'. Tap again to disable.

Taganize

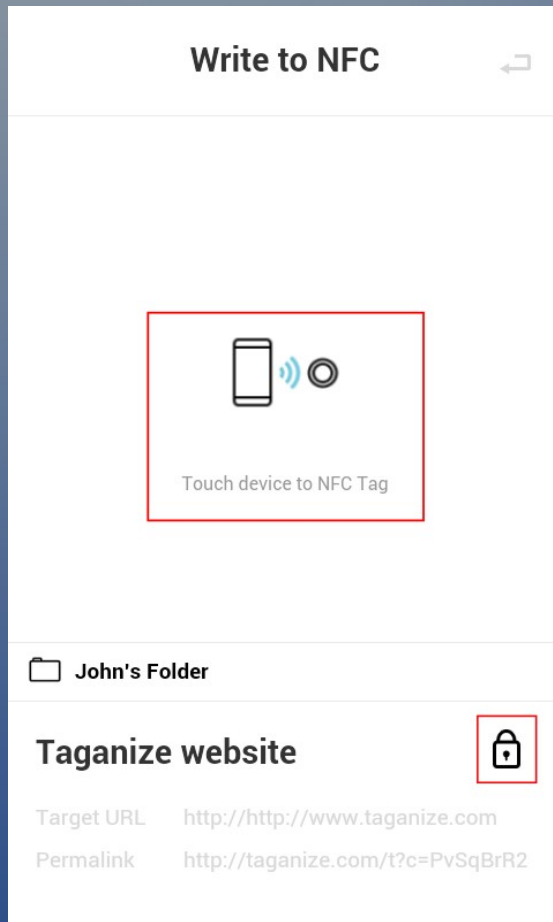

Now tap the 'Tap to write NFC' graphic found in the middle of your smart phones display.

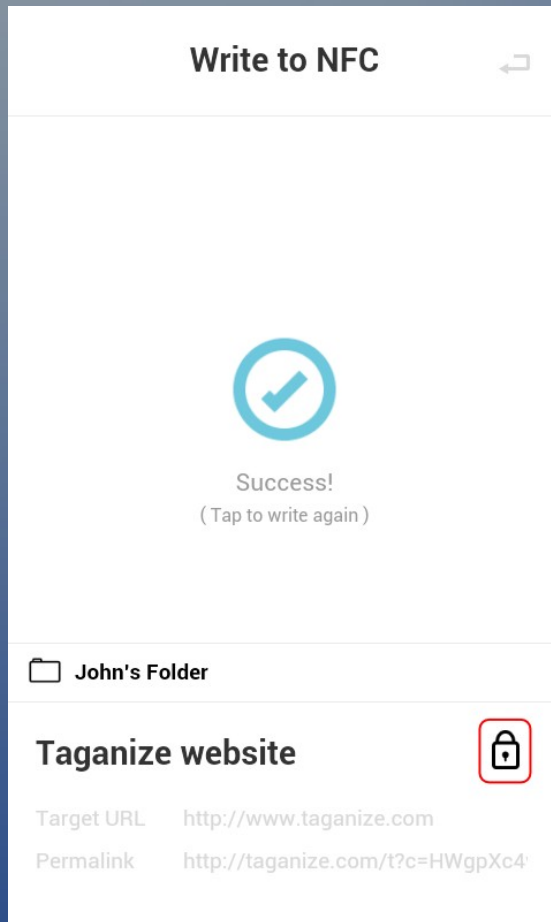

Taganize

Now touch your device to a NFC chip.

Taganize

A 'Success!' notification will be displayed once the chip has been correctly written along with a notification tone. Multiple tags can be written by simply following the instructions displayed in the middle of your devices screen. When done touch the 'back' button found on the top right corner of the app to return to desktop view.

Taganize

Tapping the tag name again reveals the 'Edit Tag' button found in the middle of the menu. Tap it to enter the 'Edit Tag' view.

Taganize

Edit Tag ↶

Tag name

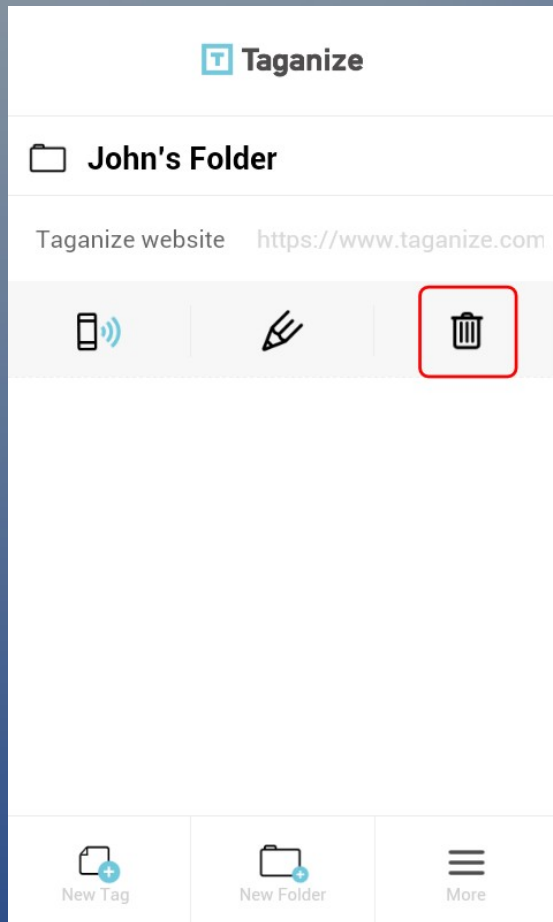

Target URL

Folder

Here you can edit the details of your tag or recycle your tag by editing the 'Target url'. This is an important feature, especially if you lock your tags in order to prevent tag-jacking.

Taganize

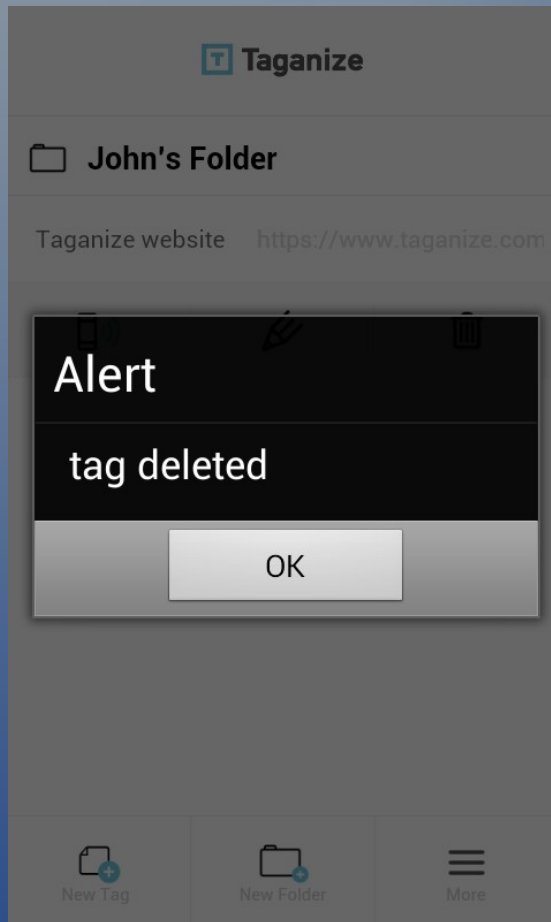

Returning once more to the extended menu reveals the trash icon found to the extreme right of the menu

Taganize

When tapped users are alerted that the tag in question has just been deleted.

Taganize

Taganize

Activate an NFC Tag in 3 simple steps:

Create a Tag → Sync App → Write to NFC

John's Folder

Taganize website	http://www.taganize.com	→
Google	http://www.google.com	x ↻

Restore Tag

Tags deleted this way can be restored through the users account at Taganize.com and toggling the trash bin and selecting the restore button.

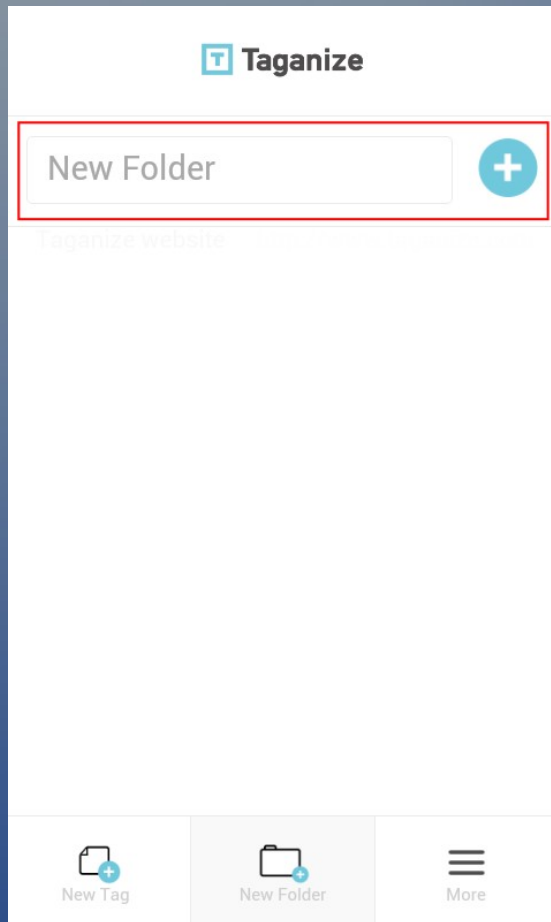

Taganize

The 'New Folder' option allows users to create folders anytime.

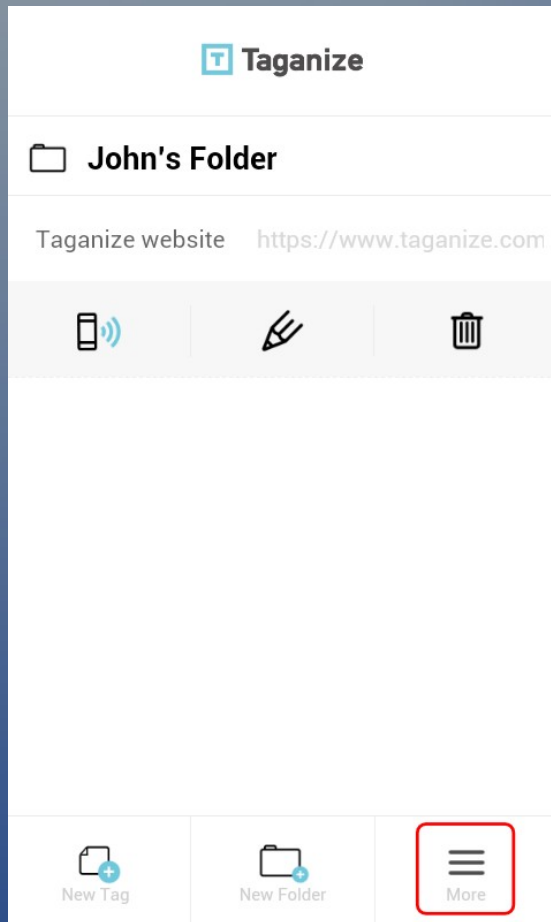

Taganize

Simply type the name of the folder you wish to create and tap the '+' button. Your new folder is ready for use.

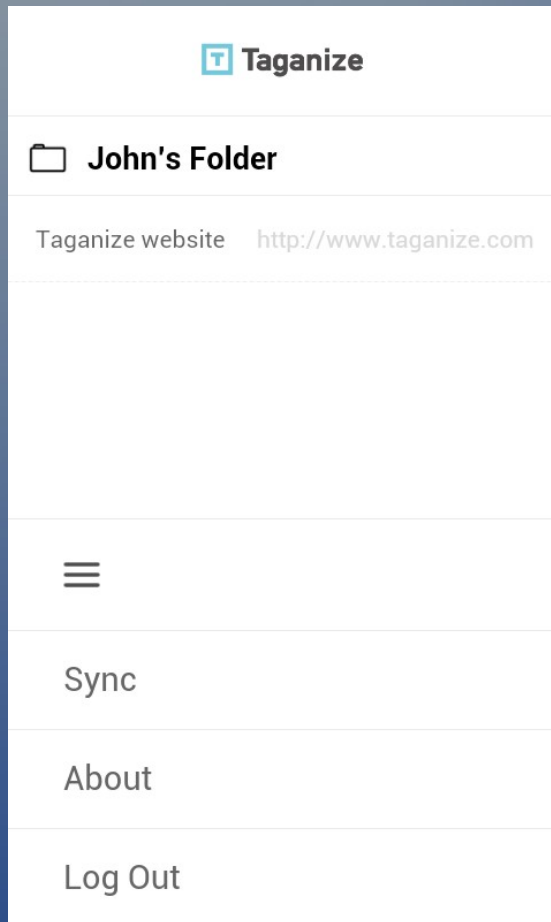

Taganize

The More button found on the bottom right corner of the app can be toggled to open and close.

Taganize

This menu allows users to sync their app with the Taganize cloud service platform, access build information and logout of the app.

Tel & SMS Uri's

When entering telephone numbers the following formats apply to both tel and sms.

00-country code-area code-subscribers number (no spaces)

00 replaces '+'. Most countries have area codes starting with '0'. When following the international format above this first '0' in the area code is dropped

Example-Domestically dialed Finnish GSM number 040-1234567 becomes 00358401234567

How the Taganize 'target url' should look like:

tel:00358401234567

sms:00358401234567 OR IF INCLUDING PREDEFINED MESSAGE

sms:00358401234567?body=test message, respond if received, please.

mailto URI

mailto:support@taganize.com OR

mailto:support@taganize.com?body=text of message here (May not work if users email client uses signature)

geo URI

Easiest way to use geo is with Google maps (eg <https://maps.google.com>)

Right click on the exact location you want to go to and choose 'What's here?'. Coordinates appear top left of screen.

Enter the geo coordinates into the Taganize target url field as follows:

For directions by car enter:

google.navigation:q=60.181136,24.832313

All others (eg: walk, bike, mass transit):

geo:0,0?q=60.173316, 24.957550

To see your location on Google Earth use:

geo:60.181136,24.832313,183
