Educational Information

The information provided below will hopefully help to explain the findings from your pet's visit. Please let us know if we can provide you more answers and/or information.

Roundworms

Ascarids, or roundworms, are the most common intestinal parasite found in dogs and cats, especially in puppies and kittens.

The adult worm lives in the intestinal tract and deposits eggs within the intestines where they pass to the outside in the stool. Diagnosis is accomplished by examining a stool sample for roundworm eggs under the microscope. Dogs and cats become infected by eating immature worms from contaminated soil or feces, or by eating infected rodents, birds or some insects. The mother may infect puppies and kittens. Many young animals are born with roundworms. Ingested larvae travel through the body to the intestine and develop into mature worms. There, adult worms begin to deposit eggs in the intestines. The eggs pass with the stool and develop into infected larvae.

Symptoms of worms in puppies and kittens are a lack of growth and loss of condition, and they will have a dull coat. Worms may be seen in vomit or in the feces. Generally they are detected through a fecal exam.

Roundworms are easily treated. They can be easily prevented by using a monthly heartworm preventative that also deworms for roundworms.

01/03/2019

Drontal Plus is to be administered by giving two tablets at the same time to Susi. This will be followed-up by giving the remaining two tablets after three weeks.

The game plan will be to administer the first two tablets in the a.m. on 4 January 2019 and the remaining two tablets in the a.m. on 25 January 2019.

Check the 'Vaccinations and Meds Records' to determine if this was adhered to or if Susi experienced and abnormalities from the medication or anything else worth noting/reporting.

01/04/19 06:20 - Susi would not chew tablets, so I opened his mouth and force fed them to him. Tablets given right after Susi's breakfast.

01/04/19 14:00 - Found evidence Susi ate his own stool. He also peed his bedding

01/04/19 20:00 - More evidence found that Susi ate his stool.
